

- Suitable for underwater cycling, increasing workout intensity
- Stainless steel construction, waterproof and rust resistant
- Unit size: 1600×1200×610mm
- Gross weight/net weight: 35/28kg
- Max. user weight: 150kg

SELLING POINTS

During the use of underwater cycling, the water resistance increases the riding intensity, and requires the whole body muscles to participate in order to maintain balance. Moreover, cycling in water is easier to shape the body and take care of the skin. During riding, the underwater resistance is equivalent to low-intensity massage, which is conducive to blood circulation. Riding underwater bicycle has the double functions of weight loss and
